Signature of the Internal

ACKNOWLEDGEMENT

I sincerely thank the following distinguished personalities who have given their advice and support for successful completion of this work.

I would like to thank **Smt. Dr. CH. RAMANAMMA**, Principal, **Y.A. Govt. Degree College for Women**, Chirala, for providing the Online Resources and allowed to carry out this Work.

I Extend my Sincere thanks to **Smt. N. RAJYA LAKSHMI**, **Head of the Dept.** for her kind Co-operation and providing the Required resources.

I am very thankful to my project guide **Sri. SK. KAREEM Asst. Professor, Dept. of computer Science, Y.A. Govt. Degree College for Women, Chirala**, for his Co-operation and inspiring guidance and immense help during the course of Project.

I Extend our Sincere thank to all other teaching and non-teaching staff of the department and who helped directly or indirectly for their co-operation and encouragement.

This Project is a proud presentation of my work to the greatness of our professors and friends who have encouraged me all through the duration of project.

S. MADHURI
(Y193016087)

DECLARATION

This is to state that the dissertation titled "**WEB BASED PURCHASED REQUISITION**" carried out at the Department of Computer Science, **Y.A. Govt. Degree College for Women, Chirala** is based on the original work carried by me under the guidance of **Sri. SK. KAREEM, Asst. Professor** towards the partial fulfillment of requirements for award of **B.Sc.** This Project work has not been submitted to any other University or Institution either in part or full towards any other degree up to my knowledge and belief.

ABSTRACT

This project is mainly developed for the better services to the customers by the hardware retailers. The project entitled “**Web Based Purchased Requisitions**” set of platform for the retailers provide service for the customers through Web Based.

A group of computer retailers twisted into an association to compete with the currently prevailing fierce competition. These members are spread across the city to provide better accessibility and service to their customers. By becoming a member of the association, they can pool all the orders from customers of different locations in the city, and make a bulk purchase to gain more margins / discounts from the main distributors. In turn, these profits can be shared with customers by providing more competitive prices, and better service.

They are looking for better media to provide, what these association members have in their mind, to the prospective buyers. Though their present locations and areas of business is a great advantage for their operations, at the same time these became hurdles to provide unified offers and services to the target customers. The communication between the association members is also another problem and is time consuming.

Internet is the best media for all what they want to provide to their customers. Internet can be used to optimal benefit in this case, with much lesser budget than any other solution. They want their web presence more interactive and informatory yet simple and easy to navigate.

WEB BASED PURCHASED REQUISITION

CHAPTER 1 INTRODUCTION

1.0 Background

This project is mainly developed for the better services to the customers by the hardware retailers. The project entitled “**Web Based Purchased Requisitions**” set of platform for the retailers provide service for the customers through Web Based.

A group of computer retailers twisted into an association to compete with the currently prevailing fierce competition. These members are spread across the city to provide better accessibility and service to their customers. By becoming a member of the association, they can pool all the orders from customers of different locations in the city, and make a bulk purchase to gain more margins / discounts from the main distributors. In turn, these profits can be shared with customers by providing more competitive prices, and better service.

They are looking for better media to provide, what these association members have in their mind, to the prospective buyers. Though their present locations and areas of business is a great advantage for their operations, at the same time these became hurdles to provide unified offers and services to the target customers. The communication between the association members is also another problem and is time consuming.

Internet is the best media for all what they want to provide to their customers. Internet can be used to optimal benefit in this case, with much lesser budget than any other solution. They want their web presence more interactive and informatory yet simple and easy to navigate.

1.1 APPSYS Software Solutions, Hyderabad

Appsys Software Solutions is an IT solution provider for a dynamic environment where business and technology strategies converge. Their approach focuses on new ways of business combining IT innovation and adoption while also leveraging an organization’s current IT assets. Their work with large global corporations and new products or services and to implement prudent business and technology strategies in today’s environment.

Appsys’s range of expertise includes:

1. Software Development Services
2. Engineering Services
3. Systems Integration
4. Customer Relationship Management
5. Product Development
6. Electronic Commerce
7. Consulting
8. IT Outsourcing

WEB BASED PURCHASED REQUISITION

1.2 Existing System

The present system involves manual operations only and no computerized models are available. A hypothetical model is being setup now that can be implemented in phases. The existing system maintains the information regarding the activities of the customer and services of the retailers. In order to save the time in looking through the numerous pages of registers to obtain the minute details to copy all the information in the view registers. This results in data redundancy and makes the register voluminous.

Pitfalls in the Existing System

1. Data Redundancy.
2. The time requires writing the details of customer purchase requisitions is more.
3. Since the information's are stored in the registers, it takes to more time to generate the reports of monthly/yearly, transactions reports.
4. More space is required to maintain all the details of all customers.
5. Reports cannot be generated very easily on the spot, it some what hazardous.
6. Complexity
7. No proper coordination between different Applications and Users.
8. Accuracy not guaranteed.

The computerized system can overcome all the above mentioned problems. This motivate undertake present system study.

1.3. Proposed System

1. Different logins for casual visitors and registered customers Visitors, prospective buyers and as well as existing customers can choose to get more information from the variety of the products displayed either on screen or through mail
2. Visitors can virtually build their computer system using online visual guide
3. Different combinations and configurations should be displayed along with the advantages and disadvantages of each
4. The selected product or system's pricing details should be visible upon selection, and it will be immediately get changed when they select different configuration
5. The system should generate an electronic estimate or quote to the customer – on screen, and the same should be sent to the visitor's email. A copy of each electronic quotation / estimation will be stored in central database for further reference and the same has to be mailed to the concerned syndicate member for further persuasion

WEB BASED PURCHASED REQUISITION

6. The said central database should maintain all the information about the Visitors, customers, syndicate members, distributors, vendors, products, and their pricings, etc.,
7. The intelligent option here is to provide the pricing structure to the visitor will be automatic, i.e. the pricing are competitive and up to date, without manually updating.
8. There should be option to manual override to change the product prices and the margin levels by the administrator.
9. The proposed system will facilitate the communication between the syndicate members very easily.
10. In addition to the quotation building, the system also tracks the status of the ordered product and furnishes the invoice when the order is executed.
11. The logged in visitor, who ordered for a product or service, can also track the status of his order or enquiry online.
12. They have also intentions to provide online service help to the existing customers.

1.4 Team Setup

The organization has formed a group of software professionals under taken the project with one project manager one senior programmer and a trainee to solve the problem. I have taken part in some aspects of the project i.e. designing few Interfaces including documentation and preparing user manuals.

WEB BASED PURCHASED REQUISITION

CHAPTER 2 SYSTEM ANALYSIS

2.1 Conversion of the Statement

Before planning a replacing for a new system it is essential to have through knowledge about the existing system along with estimation of how lost computes can be used to make its operations more effective.

System analysis is the process of collecting and interpreting facts, disposing problem and use the information about the existing system, which is also called as system study.

System analysis is about understanding situation but not solving the problem. System analysis is performed to determine whether a not it is feasible to design and information system laved on the policies and plans of an organization. To determine the user requirements and to eliminate the weakness of the present system a few general requirements are concerned.

MODULES

1. Login
2. Build Computer
3. Administration Tasks
4. Generate Quotation
5. Warranty and Replacement
6. Help.

1. Login

In this module we try to authenticate all the users/administrators entering the site. This module is placed in the Home page of the site which is the first page for those who entering the site. Here in this module for Users and Administrators we ask for User id and password and check them with the database. If they both match then they are allowed to browse the site otherwise entry is denied for them. If anybody forgets the password he is given help by reminding of his password after verifying his details. For customers we give the user level as 'C' which means they cannot access the database and other administrative tasks. For administrators the level is 'A'. These are given the full power to access the site. For visitors who are entering for the first time are asked to give their details before moving further for future reference.

2. Build Computer Module

This is the module in which a user builds a computer for him virtually with the help provided if necessary. The specification of the system depends on the user and his budget. He will be given different types of choices for each component that is needed to build a personal computer and he has to choose the one that best suits for his purpose and which is under his budgetary control.

WEB BASED PURCHASED REQUISITION

He is provided with the help like what components are necessary to build a system, what are their uses and properties and what are their prices. The total price of the system is shown on the screen when each part is selected and the overall price is also shown. According to this total cost he can change specification of his system.

3. Administration Tasks

This is one of the main modules of the project. In this module we define all the administrative tasks and how they are conducted.

4. Generate Quotation

In this module a Quotation is generated based on the system specification selected by the customer in the build computer module. This quotation is later mailed to the concerned syndicate member and the visitor/ customer.

5. Warranty and Replacement

Warranty check is done when a customer approaches for a replacement. If the product warranty has not expired then the necessary replacement action is performed otherwise if the warranty period has been expired there will be no replacement and for further details he is asked to contact the concerned Syndicate member.

6. Help

Help is the module in which an e-mail application is created. If any customer/visitor needed some details and has any doubts he may search through the FAQ provided. If still he is not satisfied he may contact the administrator by sending a mail with question and receive immediate response.

2.2 Development Environment

Hardware Requirements:

1. PIV 1.2 Ghz Processor
2. 512 MB RAM
3. 120GB Winchester Driver.

Software Requirements:

4. Window 2003 Server
5. Visual Studio .Net 2005 Enterprise Edition
6. Internet Information Server 5.0
7. SQL Server 2005

WEB BASED PURCHASED REQUISITION

2.3 Execution Environment

Server Side Requirement:

- Operating System: Windows 2003 Server.
- Web Server: Internet Information Server 5.0 or higher.
- Data Base: SQL Server 2005.

Client Side Requirement:

- Any Operating System with a Web Browser Compatibility with IE 5.0
- Internet Connection

2.4 Data Flow Diagrams

A data flow diagram is graphical tool used to describe and analyze movement of data through a system. These are the central tool and the basis from which the other components are developed. The transformation of data from input to output, through processed, may be described logically and independently of physical components associated with the system. These are known as the logical data flow diagrams.

A DFD is also known as a “bubble Chart” has the purpose of clarifying system requirements and identifying major transformations that will become programs in system design. So it is the starting point of the design to the lowest level of detail. A DFD consists of a series of bubbles joined by data flows in the system.

WEB BASED PURCHASED REQUISITION

ER-Diagrams

Data models are tools used in analysis to describe the data requirements and assumptions in the system from a top-down perspective. They also set the stage for the design of databases later on in the SDLC. Entity Relationship Diagrams (ERDs) illustrate the logical structure of databases.

There are three basic elements in ER models:

- Entities are the "things" about which we seek information.
Attributes are the data we collect about the entities.
- Relationships provide the structure needed to draw information from multiple entities.

2.5 Data Dictionary:

| Relation Name | Attribute Name | Data Type | Size | Constraint Type |
|---------------|----------------|-----------|------|-----------------|
| LOGIN_MAST | USERNAME | VARCHAR2 | 12 | PK |
| LOGIN_MAST | PASSWORD | VARCHAR2 | 12 | |
| LOGIN_MAST | USERID | VARCHAR2 | 6 | FK |
| LOGIN_MAST | USERLEVEL | CHAR | 1 | PK |
| CUST_MAST | CUSTID | VARCHAR2 | 6 | |
| CUST_MAST | NAME | VARCHAR2 | 30 | |
| CUST_MAST | STREET | VARCHAR2 | 25 | |
| CUST_MAST | AREA | VARCHAR2 | 25 | |
| CUST_MAST | CITY | VARCHAR2 | 25 | |
| CUST_MAST | PIN | NUMBER | 6 | |
| CUST_MAST | STATE | VARCHAR2 | 25 | |
| CUST_MAST | PHONE | VARCHAR2 | 15 | |
| CUST_MAST | MOBILE | VARCHAR2 | 10 | |
| CUST_MAST | EMAIL | VARCHAR2 | 30 | |
| CUST_MAST | LANDMARK | VARCHAR2 | 250 | |
| VISIT_MAST | VISITID | VARCHAR2 | 6 | PK |
| VISIT_MAST | NAME | VARCHAR2 | 30 | |
| VISIT_MAST | STREET | VARCHAR2 | 25 | |
| VISIT_MAST | AREA | VARCHAR2 | 25 | |
| VISIT_MAST | CITY | VARCHAR2 | 25 | |
| VISIT_MAST | PIN | NUMBER | 6 | |
| VISIT_MAST | STATE | VARCHAR2 | 25 | |
| VISIT_MAST | PHONE | VARCHAR2 | 15 | |
| VISIT_MAST | MOBILE | VARCHAR2 | 10 | |
| VISIT_MAST | EMAIL | VARCHAR2 | 30 | |

WEB BASED PURCHASED REQUISITION

| | | | | |
|-------------|-------------|----------|------|----|

WEB BASED PURCHASED REQUISITION

2.6 Data Base Interface:

- **Front Tier:** This project is purely a web application. Each and every user expects a user friendly and attractive interface. In order to develop the interface we have used Visual Studio 2008, Java Script. The Visual Studio 2008 tool is very easy and flexible to handle static design like macromedia tools and it contains lot of built-in controls which are very helpful in designing the interface, so this has been used to develop the attractive environment.
- **Communication Tier:** For any application it is mandatory to have a communication path between Front -end and Back-end. ADO.NET Framework is used for this specific purpose.
- **Language Chosen:** As this being a web application there is possibility to use the same application in the variety of platforms. So the application should be platform independent. As we know that the .NET is platform independent we have chosen .NET language because of its platform independency nature. This language has enormous concepts which are helpful in developing the application in the distributed environment. So we have chosen .NET language for developing this application.
- **Users of the System:** Presently the user of the system is only the administrator. The main intention here is to extend more number of users located at various numbers of branches.

ADO.NET

ADO.NET is an evolution of the ADO data access model that directly addresses user requirements for developing scalable applications. It was designed specifically for the web with scalability, statelessness, and XML in mind.

- **Connections:** For connection to and managing transactions against a database.
- **Commands:** For issuing SQL commands against a database.
- **Data Readers:** For reading a forward-only stream of data records from a SQL Server data source.
- **Datasets:** For storing, emoting and programming against flat data, XML data and relational data.
- **Data Adapters:** For pushing data into a Dataset, and reconciling data against a database.

When dealing with connections to a database, there are two different options: SQL Server .NET Data (System.Data.SqlClient) and OLE DB .NET Data Provider (System.Data.OleDb). In these samples we will use the SQL Server .NET Data Provider. These are written to talk directly to Microsoft SQL Server. The OLE DB .NET Data Provider is used to talk to any OLE DB provider (as it uses OLE DB underneath).

WEB BASED PURCHASED REQUISITION

Connection:

Connections are used to 'talk to' databases, and are represented by provider-specific classes such as **SQLConnection**. Commands travel over connections and result sets are returned in the form of streams which can be read by a **DataReader** object, or pushed into a **Datasets** object.

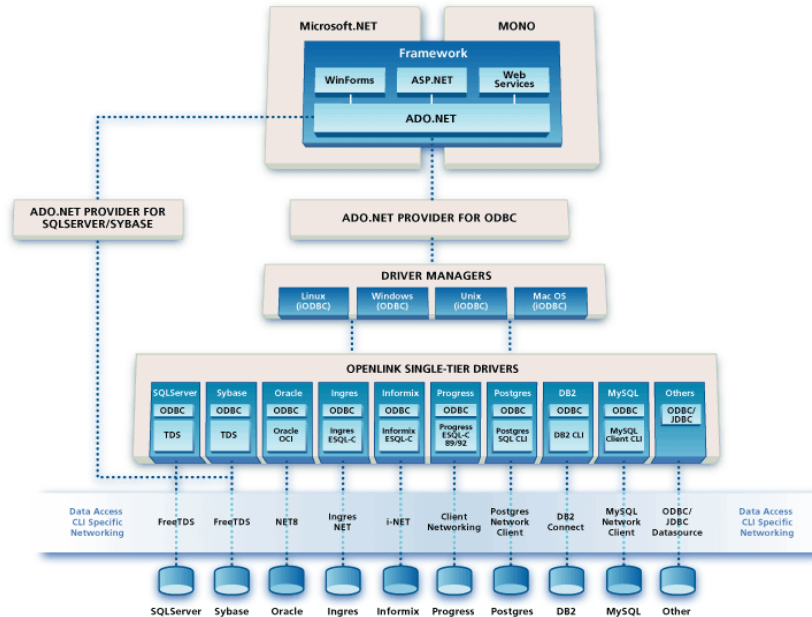

Figure 2. 6 ADO.NET Provider for SQL Server

WEB BASED PURCHASED REQUISITION

CHAPTER 3 DESIGN ASPECTS

Design is essentially a blue print of it acts as a bridge between the requirement specification and the final solution. Design is a process of translating a customer's requirements into a software product or system. Design is a blue print for a building a system, it specifies all the features that are to be in the finished product.

3.5 Sample Forms

The screenshot shows a Microsoft Internet Explorer browser window titled "WebForm1 - Microsoft Internet Explorer". The address bar displays "http://localhost:1036/WebBasedPurchaseRequisitions/HomePage.aspx". The main content area has a light blue background with the title "Web Based Purchase Requisitions" in a decorative font. Below the title, there are two input fields labeled "UserName" and "Password". Underneath these fields are two buttons: "GO" and "Clear". At the bottom of the form, there is a link that says "New Visitor's Register Here".

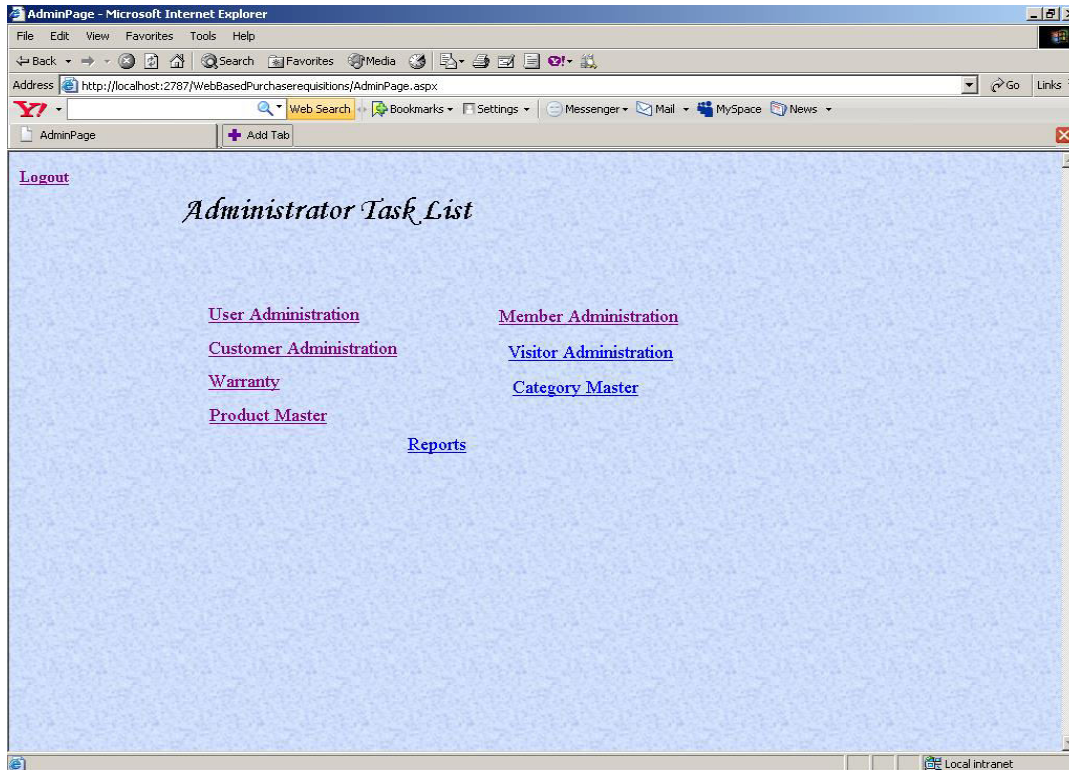

3.1. Login Form

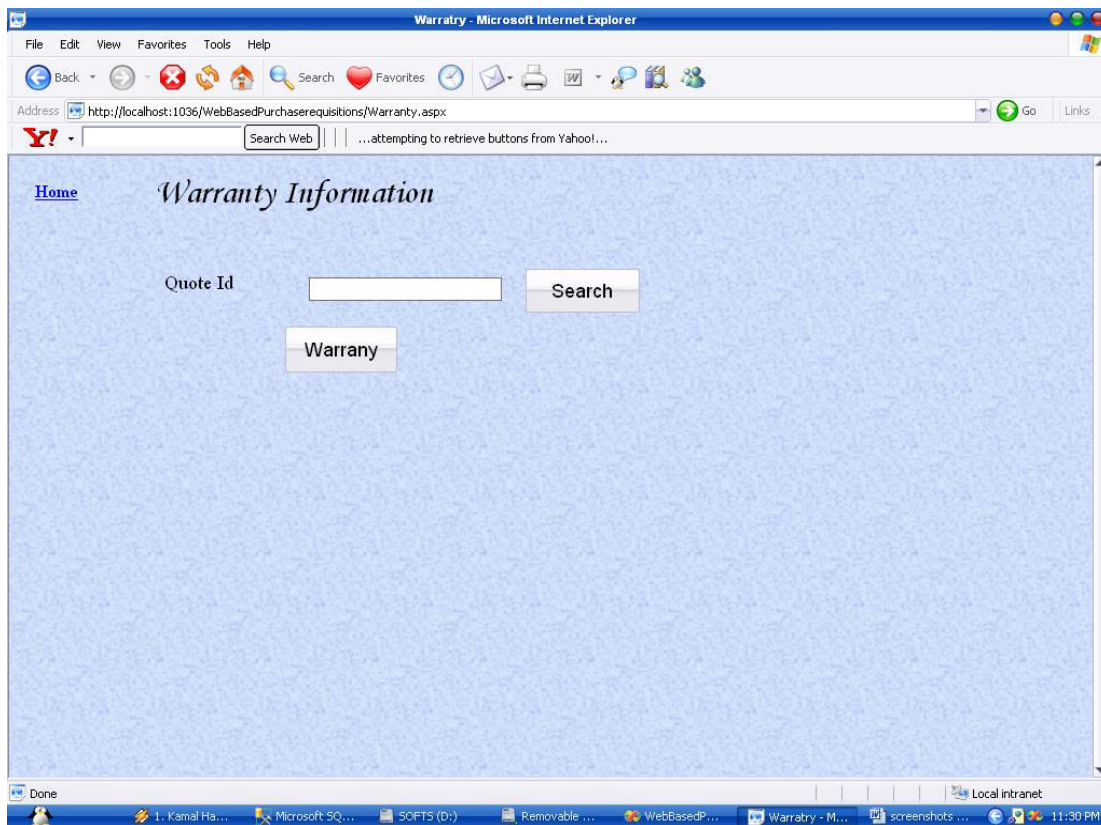

The screenshot shows a Microsoft Internet Explorer browser window titled "Visitor - Microsoft Internet Explorer". The address bar displays "http://localhost:1036/WebBasedPurchaseRequisitions/Visitor.aspx". The main content area has a light blue background with the title "VISITOR LOGIN INFORMATION" in a decorative font. Below the title, there are two columns of input fields. The left column contains fields for "Name", "Phone", "Password", "Email", and "Reference". The right column contains fields for "Street", "Area", "City", "Pin", and "State". At the bottom of the form, there are two buttons: "Register" and "Clear".

CHAPTER 5 CONCLUSION

It has been a great pleasure for me to work on this exciting and challenging project. This project proved good for me as it provided practical knowledge of not only programming in ASP.NET and VB.NET web based application and no some extent Windows Application and SQL Server, but also about all handling procedure related with “**Web Based Purchased Requisition**”. It also provides knowledge about the latest technology used in developing web enabled application and client server technology that will be great demand in future. This will provide better opportunities and guidance in future in developing projects independently.

5.1 BENEFITS:

The project is identified by the merits of the system offered to the user. The merits of this project are as follows

1. It's a web-enabled project.
2. This project offers Admin/User to enter the data through simple and interactive forms. This is very helpful for the client to enter the desired information through so much simplicity.
3. The user is mainly more concerned about the validity of the data, whatever he is entering. There are checks on every stages of any new creation, data entry or updating so that the user cannot enter the invalid data, which can create problems at later date.
4. Sometimes the user finds in the later stages of using project that he needs to update some of the information that he entered earlier. There are options for him by which he can update the records. Moreover there is restriction for his that he cannot change the primary data field. This keeps the validity of the data to longer extent.
5. User is provided the option of monitoring the records he entered earlier. He can see the desired records with the variety of options provided by him.
6. From every part of the project the user is provided with the links through framing so that he can go from one option of the project to other as per the requirement. This is bound to be simple and very friendly as per the user is concerned. That is, we can sit that the project is user friendly which is one of the primary concerns of any good project.
7. Easier and faster data transfer through latest technology associated with the computer and communication.

Limitations:

- The size of the database increases day-by-day, increasing the load.
- Simple computer operations are necessary for the users working on the system.

WEB BASED PURCHASED REQUISITION

5.2 Goals Are Not Met

- A console for the data centre may be made available to allow the personnel to monitor on the sites which were cleared for hosting during a particular period.
- Moreover, it is just a beginning; further the system may be utilized in various other types of Web based applications...

5.3 Remarks

It is not possible to develop a system that makes all the requirements of the user. User requirements keep changing as the system is being used.

As the technology emerges, it is possible to upgrade the system and can be adaptable to desired environment. Because it is based on object-oriented design, any further changes can be easily adaptable. Based on the future security issues, security can be improved using emerging technologies.
